

KADDZ

THE SMART GPS COLLAR FOR CATS

HOW IT WORKS

This cat collar is one-of-a-kind. It uses a GPS signal and continually collects data to pinpoint and keep track of your cat's position, updates you on your cat's activities and communicates via the GSM mobile network.

At regular intervals the KADDZ collar updates the data on the server and locates little tiger's latest position, should he be on the move. KADDZ uses the same technology as mobile telephones and complies with all mobile standards. The patented clasp ensures extra safety, no matter what situation your free-spirited kitty may land in. The safety break opens automatically when tugged at with 2 kg of force.

FEATURES

KADDZ has the following features:

- Patented 360° safety clasp, which opens at a tensile force of 2 kg.
- The collar incl. battery weighs less than 50 grams.
- The battery lasts up to 4 days, depending on the reception quality, the application and the selected mode. Easy battery changing without the need to remove the collar!
- KADDZ comes equipped with an accelerometer, two light sensors, an LED and a buzzer for sending acoustic signals.

INCLUDES

- 1 reflective KADDZ collar with 360° safety clasp
- 2 batteries
- 1 recharger + 1 USB cable
- Operating instructions

We offer a warranty of 12 months from the date of purchase. Any defects arising from the material and functionality will be corrected at no additional charge. This does not include batteries and damage caused by improper handling or use. Opening or attempting to open the collar voids the warranty.

SMARTPHONE APP & ACCESS VIA YOUR WEB BROWSER

With the free KADDZ app for smartphones or your web browser you always know your cat's whereabouts. Normal mode shows you a map with kitty's location a few minutes ago.

The distinguishing features of the app and browser interface are:

- You can see when your runaway cat is in a dark place (such as the cellar).
- You are automatically notified when your cat is spending a longer time in a strange building or basement.
- You know whenever your cat has left or entered the house.
- You will receive a message if your cat leaves its normal area (such as your own garden).
- You can narrow down the search area.
- Search mode.

When search mode is activated, the GPS collar sends data to the server every 30 seconds, allowing you to pinpoint your cat's exact location on your smartphone or over the Internet. You can also activate the built-in LED or buzzer to make your furry friend easier to find. We only recommend using search mode when it's necessary since it uses up more of the battery.

SUBSCRIPTION

Our subscription with a fixed prepaid rate keeps costs under control. There is no activation fee and there are no hidden charges. All applicable fees are included in the mobile subscription. There is also no minimum contract term or cancellation period. You can stop or pause the subscription at any time. However, please note that we cannot refund payments made in advance.

After receiving your KADDZ collar simply activate it. You have the right to cancel your order within 14 days after receiving the collar without any obligation to specify the reason. Within this period we will also fully refund the subscription fee.
